GENERAL PRICE LIST, 1939

TREES

All stock has been transplanted at least once and all of our twice transplanted trees as noted below are spaced in the nursery rows and have a splendid top and root development. Each tree is a fine specimen and should not under any circumstances be compared with the ordinary nursery run stock of once transplanted trees as listed in most catalogs.

Let us quote you on your list of wants. In carload lots we can make you better prices on many items we have in surplus.

PERENNIALS

**FIELD GROWN. ONE YEAR, EXCEPT WHERE NOTED.
TRANSPLANTED STOCK.**

Let us quote you on your list of wants. In large quantities we can make you better prices on many items we have in surplus.

We are frequently asked for general information in regard to proper planting times of perennials.

Perennials as a general rule, with the exception of those that love water, thrive best on good garden soil, well drained, and especially good surface drainage, so that no excessive moisture or water accumulates in beds in winter, which with changeable frost action is detrimental.

As a general rule, perennials are best moved during September, October and up to frozen ground time in the Fall, and then again in Spring, beginning with the time when the first shoots begin to show green on perennials; and from that time up into May until too much foliage and hot days terminate successful planting.

Iris of various sorts transplant particularly well shortly after blooming time, when they can be divided and pruned back for new plantings.

Peonies are best transplanted at any time during the Fall months, even up into cold weather; but if Spring planted, move them as early in Spring as possible.

Mulching perennial beds in colder climates should be done with material such as dry straw, hay, oak leaves, but never with leaves from soft wood trees, or fertilizer, or grass clippings, such as will pack down and not allow the air to reach plants. The latter environment generally creates a heating and rotting condition, and produces a loss whether in the first or in subsequent years after planting. Apply mulch only after frost has entered the ground to depth of several inches.

Perennials also like an occasional application of good garden fertilization if soil is sour, but apply with caution. If the ground is sour, apply limestone screenings (size one-eighth inch to dust) liberally before applying fertilizer.

Varieties marked with a (★) are particularly adapted for the rock garden.

Varieties marked with a (●) are suitable for waterside planting and damp places.

Varieties marked with a (◆) are good ground covers.
